

Agile Management with PPM Pro and LeanKit

March 27, 2019

Peter Laird
Director of Development, Planview PPM Pro

Work

- Feature Roadmap (major features)
- Sustaining (customer defects, internal defects, customer enhancement requests)
- Infrastructure improvements, reduction of technical debt

Resources

- Cross-functional development teams “squads”
- QA Team (manual test)
- Automation team

Goals

- Make good decisions to use resources on the highest value items
- Communicate progress and realistic expectations to stakeholders while maintaining a Lean/Agile development team
- Provide developers with a single place to look to draw work
- Be clear with QA and Automation team about what’s ready for testing

Using the Right Tools for the Job

- Individuals and interactions over processes and tools
 - Responding to change over following a plan
= flexibility, constant evolution

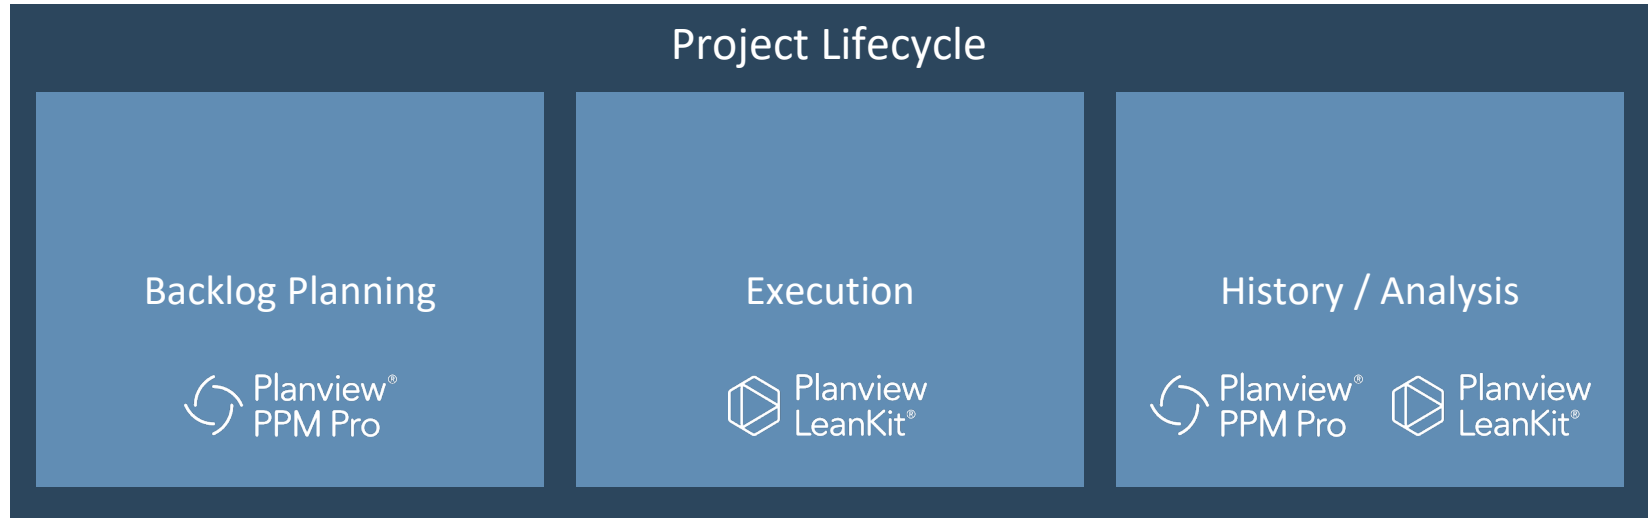

Using the Right Tools for the Job

- Individuals and interactions over processes and tools
 - Responding to change over following a plan
 - = flexibility, constant evolution

Using the Right Tools for the Job

- Individuals and interactions over processes and tools
 - Responding to change over following a plan
= flexibility, constant evolution

Demonstration

- Backlog Planning
- Squad-level Allocation
- Feature Sprint Execution
- Defect Tracking

Thank You
