Feature (Follow the hyperlink to view more details)	Change Details	Considerations
Global Search	Selecting the global search icon on the top of any page and entering a search term will return results across the instance. Results can be filtered by ideas, users, comments, and challenges.	By default, the filter will be set to "ideas". All idea details are searched, including the idea tags and closure form details.
Star Rating	Star Rating will now use an average of ratings, without adding weight or altering the rating using the previous Bayesian calculation. Rating count will be shown on each idea to all users.	Active Challenges with rating enabled will be recalculated for each idea and the graduation setting will be increased by "1". We suggest checking graduation settings and idea progress for each open challenge and challenge template.
Up / Down Voting	Down voting has been removed and has been replaced with a new single vote icon for both ideas and comments. All users can view who has supported the idea or comment. Additionally, we have removed the Approval Rating metric and graduation setting for all communities and challenges.	For all open, draft, and scheduled challenges and communities, ideas meeting all graduation criteria except approval rating, will graduate to the next stage upon upgrade. Challenges and templates should be reviewed.
Image Management	Custom image galleries can be added for ideas and challenges by super admins. This change is instance wide and can be configured using the Image Management setting. The idea owner Thank You image can also be customized here.	These changes are instance wide and will update challenge templates as well. Existing ideas are not affected. Once you create a custom gallery, all stock images are removed.
Quick View UI	The new quick view pop up will provide a more guided experience with both the idea details and commenting being directly linked from the dialogue pop up.	Prompt text can be edited using the language editor if desired.
Pairwise Updates	The top ranked ideas, top pairwise voters and the pairwise activity widgets will be hidden to non-admins by default.	Widget permissions can be modified using the Site Editor if desired.
Challenge Wizard	A "sponsor" and "invited crowd size" field has been added to the wizard. The Sponsor will be displayed on the Challenge Home page and the invited crowd size entry will be available in Insights. Additionally, the email frequency for the "Challenge Update" email can be configured from the wizard.	Remember to update the email frequency as this email is sent to all members of challenge. To deactivate, use the email templates configuration.
Idea Page Changes	A new idea control panel will be available from the idea page under the "More" option. Additionally, the Attachments interface has moved and a new activities widget will include recent actions pertaining to the idea.	If needed, update your internal assets to inform participants and admins on the UI changes.
Consolidate Ideas	The Consolidate Ideas feature now shows all ideas when consolidating and viewing ideas.	No action needed
Editable Widget	Canceling changes in an editable widget now functions as expected.	No action needed
Uploading Files	Files with uppercase extensions e.g .PNG and .JPG can now be uploaded.	No action needed
Draft Ideas	Draft ideas will now be displayed on user profiles regardless of additional configuration needs.	No action needed
Remember to make any desired changes to your existing challenge templates as desired
