Welcome to the Planview Training Academy! Here, you can learn to use any Planview product. Information is divided by product into broad topics called curricula, which include one or more courses. Each course contains a series of topics made up of text and videos that will enable self-enablement. Browse the products and curricula below or instantly access any course directly using the Course Library menu above. Or click on a product name to see all the curricula and courses for that product.

- Planview Enterprise One - Portfolio and Resource Management

Getting Started
Complete this course to familiarize yourself with the system before taking other curricula or courses for more in-depth information. This class presents information on all the components of Planview Enterprise One - Portfolio and Resource Management, including important concepts, common tasks, and frequently used screens in the application.

1 Course
foundational
Team Members - Time Reporters
Do you use the system only to report your time and view your assignments? This course is for you, whether you report time in Portfolio and Resource Management, in Projectplace, or via the mobile timesheet app.

4 Courses
beginner

Project and Work Management
Learn about how the system flexibly implements the project/work management process. Take projects/work from start to finish (requests, scheduling, finances, resource assignments, execution), manage timesheets from a work management perspective, and understand work reports and analytics.

14 Courses
beginner
Resource Management
Portfolio and Resource Management lets you work with teams of resources or individuals. Learn how to maintain information about each resource and then use that data to find resources that fit work requirements, or find any unfilled requirements that match a resource. Includes: timesheets for resource management, basic concepts and screen functions, assignment types, and data management.

4 Courses
beginner

Investment and Capacity Planning
Investment and Capacity Planning enables optimal program and project investment decisions. This curriculum provides an overview of functionality, covers the Rank, Analyze, and Balance pivot views, shows how to use Investment and Capacity planning to work with projects and create reports, and explains how to use preferences and the ribbon and tile interface.

5 Courses
Strategic Program Management
The goal of strategic planning is to use programs and their underlying projects to transform the business via any number of outcomes (e.g., products, applications, services, technology, facilities, and more). Discover how to create build, review, and manage a strategic plan.

4 Courses
intermediate

Outcome Management
This curriculum covers the management of outcomes (products, services, applications, technology, assets, facilities, and more) in Portfolio and Resource Management.

3 Courses
intermediate
Microsoft Project Add-In and Portfolio and Resource Management
This curriculum lists best practices for using Microsoft Project with Enterprise One - Portfolio and Resource Management, then provides instructions for sharing data between the two systems.

1 Course
intermediate

General Administration
The administrator is responsible for defining and maintaining information about the structures, users, rates, calendars, tiles, dashboard reports, Data Mart, and extracts for the organization. These are things that change often and need to be maintained as time goes on.

1 Course
intermediate
Advanced Administration

Advanced administration covers creation and management of fields, alternate structures, request mappings, configured screens, lifecycle models, scripted dialogs and configuration migration. These activities go beyond daily administration tasks.

1 Course
advanced

Instructor-led Training Prerequisites

This curriculum is a prerequisite for instructor-led training in Planview Enterprise One. Students will be instructed as to which courses pertain to their scheduled training.

8 Courses
beginner
• Planview Enterprise One - Capability and Technology Management

intermediate

Report Creator
Have you been assigned the Report Creator role in Planview Spigit? Here’s what you need to know.

1 Course
advanced
Getting Started
Designed for users who are new to the Planview Enterprise environment, this collection of courses explains how to customize your account preferences, introduces all the major interface elements, and discusses important concepts in Planview Enterprise.

7 Courses
beginner

Time Reporting
The simple, web-based timesheet tools allow an organization’s staff to report information to the central repository at any time from any place. This information is then used to update project schedules and account for the effort expended. Time may be approved automatically or reviewed by managers.

4 Courses
beginner
Projects and Work
This collection of courses familiarizes you with project/work management functionality in Planview Enterprise. Topics range from capturing demand via requests, through defining projects, planning and scheduling, project execution, and closure. Project-related topics such as CRIs and support tickets are also covered.

8 Courses
beginner

Resource Management
This curriculum teaches how Planview Enterprise enables a resource manager to maintain information about each resource and then use that data to find resources that fit work requirements, or find any unfilled requirements that match a resource. Basic concepts and screen functions are covered, assignment types are explained, and data management is discussed.

3 Courses
Analytics and Reporting
This course provides general information on working with reports and report tiles. Administrators can create and share custom and customizable chart or table report tiles that will display on the ribbons for Work, Strategies, Outcomes, and Requests entities. These reports can be configured to open within the Planview Enterprise main window or open in a new window. All users can view and change settings on these reports.

4 Courses
intermediate

Investment and Capacity Planning
Investment and Capacity Planning enables optimal program and project investment decisions. Investment and Capacity Planning uses robust analysis to allow you to make better decisions on which program and project investments to approve based on financial and capacity targets. Available resource
capacity (typically by role and resource type) is compared with the requested demand to encourage informed planning decisions with capacity in mind.

2 Courses
intermediate

Strategic Planning and Outcomes
Learn how to create build, review, and manage a strategic plan and its outcomes. The goal of strategic planning is to use programs and their underlying projects to transform the business via any number of outcomes (e.g., products, applications, services, technology, facilities, and more). Planview Enterprise’s Strategy programs enables you to look at strategies in the context of the underlying delivery mechanisms (programs and projects) and outcomes.

5 Courses
intermediate
Financial Planning
Use this curriculum to better understand budget setup and analysis. This curriculum consists of a single course that focuses on the financial management of data in the system for project, strategies, and outcomes. The material in this course is from the Project Financial Planning and Program Planning capabilities.

1 Course
intermediate

Administration
The Planview Enterprise administrator is responsible for defining and maintaining information about the structures, users, rates, calendars, tiles, dashboard reports, Data Mart, and extracts for the organization. These are things that change often and need to be maintained as time goes on.

13 Courses
intermediate
Configuring Planview Enterprise
Set up and maintain many of the “behind the scenes” functions. These include the Global and System settings, the Labor Rates, the Requests functionality structure, the configuration of the Migration Tool, and also the administration of operational items such as Data Mart, content management and Agile functionality.

5 Courses
intermediate

Instructor-led Training
